SUMMARY

Senior Business Intelligence professional with over 5 years of experience in data modeling, strategic analytics, and stakeholder management. Specialized in transforming complex datasets into actionable insights that drive operational excellence and revenue growth.

SKILLS

- **Data & Analytics:** Advanced SQL, Data Modeling, Financial & Operational Analysis, Predictive Forecasting, Sensitivity Analysis
- **Business Intelligence Tools:** Business Objects, PostgreSQL, Postman, Tableau, Excel
- **Stakeholder & Leadership:** Cross-functional Team Leadership, Strategic Thought Partnership, Project Management, Mentorship
- **Technical Engineering(Supportive):** Java(Spring Boot), React, TypeScript, Docker, CI/CD Pipelines

EXPERIENCE

Southern Glazer's Wine & Spirits, Farmers Branch, TX — *Business Intelligence Manager*

June 2023 – July 2025

- Acted as a strategic thought partner to business leaders by transforming raw data into visualization dashboards, driving a 10% increase in sales through demographic-specific metrics.
- Served as a subject-matter expert for a multi-vendor budget tracking system, enabling stakeholders to manage and optimize advertising and marketing expenditures.
- Developed advanced analytical models and custom dashboard templates to track quarterly volume goals, utilizing historical data to evaluate performance trends and future growth scenarios.

Southern Glazer's Wine & Spirits, Farmers Branch, TX — *Business Intelligence Analyst*

Jan 2022 – May 2023

- Quantified the impact of business initiatives by identifying bottlenecks in the reporting pipeline, reducing project delivery times by 25% through automated live data updates.
- Partnered cross-functionally with Finance and Operations to identify marginal drains within stakeholder portfolio, providing actionable recommendations that increased margins by 2%.
- Translated complex analytical findings into tailored software solutions and reports for both technical and non-technical leadership audiences.

Southern Glazer's Wine & Spirits, Farmers Branch, TX — *Night Warehouse Supervisor*

Mar 2020 – Dec 2021

- Led a team of 25 employees, coordinating operations to meet strict performance deadlines and improve on time delivery by 5%.

PROJECTS

Sentinel Dashboard (Full Stack)

Tech Stacks: Java Spring Boot, React, JavaScript, SQL, Docker

April 2026 – Present

- Developed a real-time operational monitoring platform to track service health and availability, ensuring system uptime through modular React components and SQL logging.
- Implementing an intuitive Web UI to visualize service statuses, focusing on modular components for scalability.
- Configuring Docker containers to ensure consistent development and production environments, resolving container conflicts to streamline deployment.
- Integrating a SQL backend to log service history and provide historical performance data for system maintenance.

Dallas Learning Center (Full Stack)

Tech Stacks: Java Spring Boot, React, JavaScript/Typescript, SQL(Postgres), HTML5, CSS3

Feb 2026 – March 2026

- Architected a data-driven tracking application using PostgreSQL to model complex session tracking and financial transactions with ACID compliance.
- Developed an intuitive Web UI with reusable React components and structured state management to ensure long-term maintainability.
- Designed relational database schemas in PostgreSQL to support session tracking, user roles, and financial transactions.
- Engineered secure back-end services using Spring Boot to support complex credit-based booking logic and ensuring transactional integrity (ACID compliance).
- Standardized the CI/CD pipeline by integrating version-controlled seed data, ensuring the application remains robust and production-ready across different environments.

EcoPulse: Home Energy Dashboard (Back-end)

Tech Stacks: Java Spring Boot, Hibernate, Postman, PostgreSQL

Dec 2025 – Feb 2026

- Developed a secure Web application back-end using Spring Security and JWT, managing custom filters for protected endpoints.
- Designed and support SQL databases to persist high-volume environmental data while implementing secure back-end services to protect data integrity.
- Validated application reliability by developing unit and integration tests with JUnit and Mockito.
- Managed deployment workflows and environment variables using GitHub and Render for seamless CI/CD integration.

PROFESSIONAL DEVELOPMENT

Full-Stack Software Engineering Fellowship | Dallas Software Developers Group | Feb 2026

- Intensive 6-week program focused on Java Spring Boot, React, and PostgreSQL. Engineered a full stack application with a focus on relational database design, secure API development, and CI/CD automation.
